## **APPENDIX I**

### **(MARKED-UP VERSION OF AMENDED CLAIMS)**

1. (Amended) A nail-setting claw hammer head, comprising:

a main body disposed along and about a horizontal axis, a vertical axis and a transverse axis which intersect one another perpendicularly at a point of intersection to define a center of mass, the main body having a top surface and a rear surface with the rear surface including a nail-head receiving recess formed therein; and a claw connected to the rear surface of the main body at a first end and forming a fulcrum surface with the top surface, the claw curving about the point of intersection and disposed apart from the rear surface, the claw terminating at a second end opposite the first end with a pair of claw sections defining a V-shaped slot therebetween, the nail-head receiving recess being positioned to face the V-shaped slot ~~and in a plane defined by the horizontal and vertical axes.~~

10. (Amended) A nail-setting claw hammer head for holding a conventional nail having a shank portion and a nail head portion connected to the shank portion, the nail-setting claw hammer head comprising:

a main body disposed along and about a horizontal axis, a vertical axis and a transverse axis which intersect one another perpendicularly at a point of intersection to define a center of mass, the main body having a front surface, a top surface and a rear surface with the rear surface including a nail-head receiving recess formed therein;

impact member connected to and projecting from the front surface, the impact member having a neck and a hammer face; and

a claw connected to the rear surface of the main body at a first end and forming a fulcrum surface with the top surface, the claw curving about the point of intersection and disposed apart from the rear surface, the claw terminating at a second end opposite the first end with a pair of claw sections defining a V-shaped slot

therebetween, the nail-head receiving recess positioned to face the V-shaped slot such that the nail-head receiving recess is sized and adapted to receive the nail head portion of the nail and the V-shaped slot is sized and adapted to receive the shank portion of the nail in order to wedge the shank portion therein, ~~the nail-head receiving recess being in a plane defined by the horizontal and vertical axes.~~
